Benchmarking Systems

Today's challenges for mobile network operators are manifold. Subscribers demand state-of-the-art mobile internet and multimedia services. New technologies have to be mastered without impairing existing levels of network quality. At the same time, competition is intense, requiring a combination of fast action and cost efficiency.

Focus Infocom assists network operators in achieving success under these challenging market conditions. As a specialist in testing and measurement systems for mobile communication networks, we understand our customers' needs. With more than ten years of experience in this highly dynamic field, we offer powerful, efficient and user-friendly tools and solutions.

Our customers are mobile network operators worldwide. We are proud of the fact that many innovative, fast-growing operators rely on Focus Infocom's technology, experience and dedication. In many cases they have made our products their standard measurement tools. We provide a wide range of products, including autonomous and interactive measurement systems, expert systems made for diagnostic analysis, and quality of service evaluation systems for monitoring and benchmarking measurements.

Cutting-edge technology and performance is only a part of the spectrum we provide. Of equal importance is the fact that our systems and solutions are designed to provide user-friendliness and ease of operation. Open, flexible architectures ensure easy integration and maintenance and therefore the long-term value of investments. Just one example: our data format and QoS methodology is fully open to all licensed users of Focus Infocom measurement tools.

Autonomous measurement systems

Robustness, versatility, productivity, fleet management with integrated pre-processing

Interactive measurement systems

High performance, user-friendliness, highly versatile visualisation

Turn-key benchmarking systems

Scalability, user-friendliness

Distributed measurement systems

Extreme scalability, robustness, performance

Post-processing, data management and analysis systems

High performance, flexibility, open architecture

Individual analysis solutions

User-friendliness, high-performance, integratability

However, our engagement goes far beyond that of a mere tool manufacturer. We place our experience and expertise at the disposal of our customers. Using our proven standard modules and components as a base, we supply our customers with task-specific solutions tailored to their individual needs, improving their competitiveness.

Our active participation in standardisation efforts contributes to the overall progress in mobile communication QoS measurement technology. Many network operators trust our concepts and methods, which result from our rich portfolio of practical experience.

Intense contact between customers and our developers and technicians is part of the way we work. Our lean organisational structure guarantees fast, transparent processes and "straight to the point" service. Striving for the best value for our customers, we have created a network of other specialists and resources in our region and beyond which delivers flexibility and performance wherever it is required.

Focus Infocom's Mission Goals

- Putting cutting-edge technology and experience into our customers' hands
- Providing best value for money
- Speed and effectiveness
- Long-term reliability and continuity
- Precision and thoroughness

While we are fast and efficient in our everyday work, we also believe in the long-term stability and continuity of customer relations. We will be pleased to answer any questions you may have at any time. Please call us – we will be glad to help you.
